The Tube Weasel

Right Angle ID Clamping End Prep Tool
3/4" (19.1mm) ID to 3" (76.2mm) OD

Provides Superior Value and Performance

The Mactech Tube Weasel EPL is a lean, extremely durable tool that performs end preps on all boiler tube alloys quickly and efficiently. Featuring a right angle gear head drive system which incorporates dual opposed tapered roller bearings, this compact tool provides a big bite with a small appetite because it requires only (25 cfm), 708 lt./min of air to pull a heavy continuous chip.

Key Features

- Right angle tool rigidly mounts to tube ID
- Sealed construction allow use in any orientation
- Fits a "Dutchman" and handles hard alloys
- Clamping system is self-centreing and easy to use
Blade lock system securely holds cutting blades
- Chatter-free end preps produce thick continuous chip
- Torque-free operation with TiN coated cutting bits
- Requires only (25 cfm), 708 lt./min air flow
- Gear head design has performed millions of end preps
- Field proven and simple to operate and maintain

In Action

The 'Tube Weasel' fits a Dutchman window for single tube end prep work and totally sealed construction allows it to be used in any orientation. Most importantly, the holding clamps are designed to stay on the mandrel and not fall down the tubes.
