

Portable 3 Axis Gantry Milling Machine

A Portable Solution for On-Site Milling Requirements

The 3-axis gantry milling machine is one of Mactech Europe's mid-range portable mills, capable of precise tolerance milling, drilling, boring and many other on-site machining operations. It is ideal for repair work where dismantling is not possible or practical. This machine can be clamped, bolted or weld attached to the workpiece via the jacking plates, which also allow for precise levelling of the machine, regardless of the surface it is mounted to.

The Milling Machine can machine steel and steel alloys, stainless steel, aluminium, copper-nickel, nickel-copper-iron, and bronze. Please speak to us if you require further information regarding optimal feed speeds and spindle speeds for different materials and cut depths.

Mactech carries a full line of high-speed tool bits, drill bits and accessories for most machining operations.
