

Portable 3 Axis Linear Milling Machine

A Portable Solution for On-Site Milling Requirements

Mactech Europe's Portable 3 Axis Milling Machines offers a cost effective solution for your on-site milling problems.

The 3-axis linear milling machine is one of Mactech Europe's mid-range portable mills, capable of precise tolerance milling, drilling, boring and many other on-site machining operations. It is ideal for repair work where dismantling is not possible or practical.

This machine can be clamped, bolted or weld attached to the work piece via the jacking plates, which also allow for precise levelling of the machine, regardless of the surface it is mounted to.

The Mactech 2m Linear Milling Machine can machine steel and steel alloys, stainless steel, aluminium, copper-nickel, nickel-copper-iron, and bronze. Please speak to us if you require further information regarding optimal feed speeds and spindle speeds for different materials and cut depths.

Mactech carries a full line of high-speed tool bits, drill bits and accessories for most machining operations.

A Portable Solution for On-Site Milling Requirements

Specifications

Travel

X Travel	2000mm Servo/Pneumatic Drive
Y Travel	350mm Servo/Pneumatic Drive
Z Travel	120mm Hand feed

Drive Systems

Drive Information

The Mactech 3-axis linear milling machine is supplied with either a hydraulic, pneumatic, or electric spindle motor

Spindle Drive Hydraulic Motor: MM50

Servo Motor

X-Feed Servo Motor	AL - 500P 780 in-lb Max Torque
Feed Rate	25-560mm/min (1-22 inches/min)
Power	Suitable for a nominal 230-400/3/50 supply
